FlameThrower Best Practice

- FlameThrower Coleus were successfully grown with No pinch/No PGR.
- Pinching one week prior to transplant increased branching, but is not needed.
- No pinch and PGR is needed!
- ❖ If desired or growing pot tight, a Pinch one week prior to transplant and a B-Nine 2,500 ppm/Cycocel 750 ppm spray, or low Sumagic rate application 2 weeks after transplant will provide some control.
