

Genesis Zonal Geraniums

What Are They?

Cuttings are pre-callused and graded in our production facilities.

Why Would I Use Genesis Cuttings?

Because They Save You Money!

1. Shorter Overall Crop Time

- Reduces propagation time by 50%.
- Less heating cost.
- More turns per season.
- Reduced overall input costs.

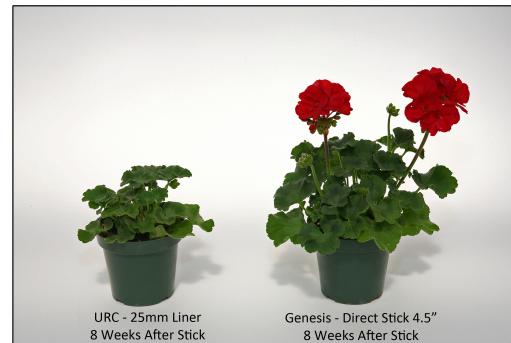

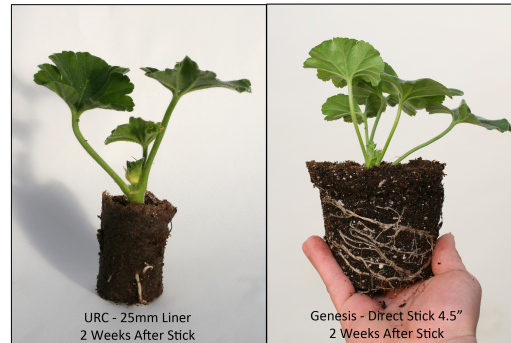

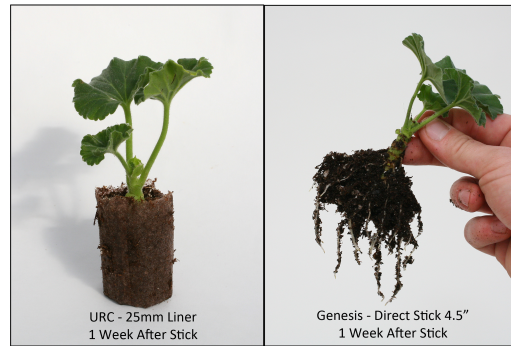

2. Ideal For Direct Stick

- Reduce greenhouse temps faster for less heating costs.
- Less shrink. More consistent rooting results in more consistent finish.
- Less PGRs needed because temps are reduced faster.
- Shorter crop time reduces overall input.

3. Reduces Losses / Grading In Propagation

- Premium quality cuttings.
- Takes risks out of propagation.
- No grading needed at finish.
- Bench runs

Direct Stick Production

Liner Production

When Do My Genesis Cuttings Need Mist?

Depending on conditions, Genesis cuttings need around 3 - 5 days of mist, URC need around 5 - 7 days of mist.

Where Can I Direct Stick Them?

Genesis cuttings are ideal for direct stick production in 4.5", 6", gallons or baskets. You can prop under traditional automated mist, or can cover them with remay cloth and hand mist them. They can even be propagated with out bottom heat (with low temps of 60° F).

What Series Are Offered?

Presto, Precision, Fantasia, Designer, Allure
