Voltage Yellow

Osteospermum

Budded Cutting Trial

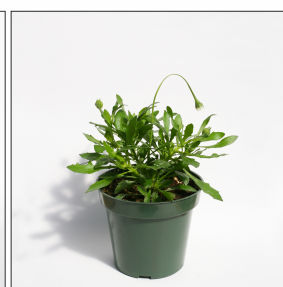

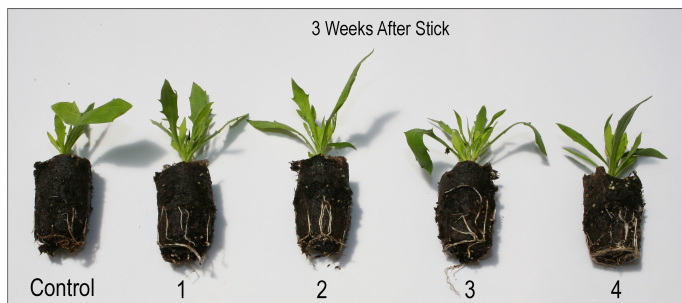

Purpose Of Trial :
To evaluate if budded cuttings could be successfully used for this variety.

Methodology :
Cuttings with four stages of bud development were propagated and grown out to compare with vegetative (no bud) cuttings.

Conclusions :
1. Trial showed that budded cuttings root with the same speed and quality as non budded cuttings.
2. All stages of bud development finished at the same time. Non budded cuttings finished about 1 week later.

Importance To Growers :
1. Trial showed that with this variety, it is okay to use budded cuttings.
2. Trial showed that Voltage Yellow can be successfully grown with out a pinch.

Budded Cutting
No Pinch - No PGR
2 Weeks After Transplant

Budded Cutting
No Pinch - No PGR
4 Weeks After Transplant

Budded Cutting
No Pinch - No PGR
6 Weeks After Transplant

Budded Cutting
No Pinch - No PGR
8 Weeks After Transplant
