EnduraScape Blue Improved

EnduraScape Pink Bicolor

Extend Your Season with EnduraScape Verbena

The name speaks for itself here. EnduraScape can endure temperatures over 100 deg. F in the summer and can handle temperatures in the low teens and still rebloom. It's sure not to disappoint with the high bloom count and full vibrant color. And it has excellent powdery mildew resistance.

The series includes vibrant colors like Magenta, Purple, Hot Pink, White Blush, Dark Purple and Red. Also included in the EnduraScape series is Pink Bicolor, an All-America Selections winner. New this year, EnduraScape Blue Improved joins the lineup with better center flower fill and more upright habit to match EnduraScape Dark Purple. This blue is a standout color that can't be overlooked.

We recommend finishing EnduraScape in a gallon allowing the plant to reach an appropriate size for use in the landscape or large containers. This is a great season extender with an impressive range of hardiness.
