Honeybells Cuphea

General & Information

Honeybells roots faster than comparable cuphea, reducing your costs and production time. Able to be produced at lower temperatures, it can also decrease the overall cost of Spring greenhouse production. Likewise, Honeybells requires less special treatment because of its high resistance to Oedema. This exciting new Summer item will drive more sales at retail, as a new cuphea for the consumer who knows and loves this class.

A 2019 University of Georgia Plants of Distinction award winner. The original pollinator-pleasing plant from the collection.

Ball Flora Plant.
