## Solera™

The first interspecific geranium series!

Medium-sized mounded plants keep their blooms all season.

Excellent garden performance.

Easy-to-control, medium greenhouse habit.

Interspecific breeding means great heat tolerance and longevity. Available out of our state-of-the-art YecaFlora farm in Mexico, with

trucking to the U.S. border.

Best suited to 5-in. (13-cm) and larger pots and hanging baskets.

The most popular color for geraniums expands this heat-loving series.

## Comments:

Ball Flora Plant...

Stick immediately upon arrival. Geraniums are best rooted in media in strip form to allow for maximum airflow and avoid foliage overlap. After initial rehydration, careful misting is required to optimize callus and root initiation. Mature leaves should show slight wilting at midday and regain turgor in the late afternoon under ideal mist conditions. Leaf petiole wilting indicates undermisting. Overmisting leads to Botrytis. Remove flower buds at transplanting.
